

MODEL PC50

A Time & Attendance System that's Big on Features and Small on Price

PayClock PC50 is an all-new state-of-the-art system that uses proximity technology to instantly identify employees. Designed for small businesses with up to 50 employees, Lathem's PayClock time and attendance system automatically calculates total worked hours including overtime. Employees punch in and out at the terminal with a proximity badge. A large display and internal speaker provide employees instant feedback on their in/out status.

Powered by an included USB cable that connects to the host computer.

Plays audio messages when employees punch in. See messages on back.

Visual punch acceptance is shown when Lathem oval glows green or red.

Keeps track of each employee's total worked hours for that pay period.

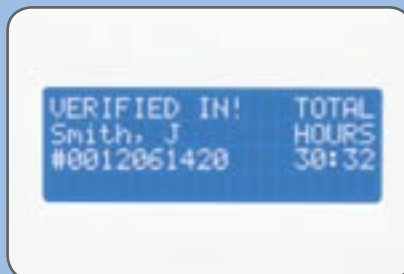

Punching

Just touch the badge to the front of the PC50 to clock in and out. No more worn out badges, time cards, or paper time sheets.

Messaging

PC50 instantly displays the employees in/out status and plays optional audio messages announcing the employee status.

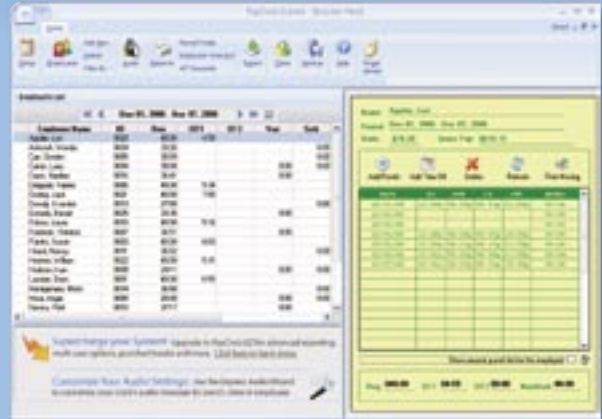

Verification

Once the punch is accepted, the display shows the employee name and total hours worked in the pay period.

The all-new PayClock Express software cuts payroll preparation in half.

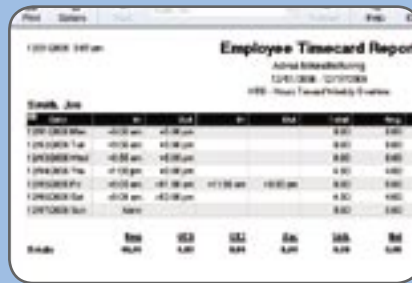

Complete punch to paycheck system!

- Employee punches instantly available in the large easy-to-read time card
- View your complete employee list and easily scroll through pay periods
- Add or delete employees, and select audio files from the easy-to-use ribbon bar
